

INNOVATION LAB

Design Innovation

During laser development, our team works with your design engineers and project managers to bridge the gap between theoretical and actual precision parts manufacturing. We'll design the ideal laser tool for the job.

Cutting Edge Tech

Creating custom laser tools allows the exact project parameters to be met with an unlimited amount of combinations and variations. We continually research new technology to expand our capabilities.

Unmatched Quality

We are able to dimensionally and visually inspect every part to make sure all specifications are met with our in-house OGP systems which allow us to measure parts at 300x magnification.
